(54) Title: NONAQUEOUS PRESSURE-SENSITIVE ADHESIVE FOR MEDICINAL TAPE PREPARATION FOR PERCUTA-NEOUS ABSORPTION, MEDICINAL TAPE PREPARATION FOR PERCUTANEOUS ABSORPTION, AND PROCESS FOR PRODUCING THE SAME

- (54)発明の名称: 医療用経皮吸収テープ製剤用非水性粘着剤並びに医療用経皮吸収テープ製剤およびその製造法
- (54) 発明の名称: 医療用経皮吸収テープ製剤用非水性粘着剤並びに医療用経皮吸収テープ製剤およびその製造法 (57) Abstract: A nonaqueous pressure-sensitive adhesive for use in a medicinal tape preparation for percutaneous absorption which comprises (a) a substrate, (b) a pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive adhesive layer formed thereon comprising a drug and a nonaqueous pressure-sensitive adhesive adhe sitive adhesive, and (c) a release film disposed on the adhesive layer; and a medicinal tape preparation for percutaneous absorption which employs the adhesive. The adhesive comprises a nonaqueous solvent and, contained therein, a copolymer obtained by copolymerizing a (meth)acrylic monomer having an acetoacetyl group in the molecule (preferably 2-acetoacetoxyethyl methacrylate) with one or more monomers selected among (meth)acrylic monomers containing no acetoacetyl group and copolymerizable vinyl monomers. The adhesive, which contains the copolymer, can contain an oily substance such as a plasticizer and needs no crosslinking agent. The medicinal tape preparation for percutaneous absorption is excellent in adhesive force and cohesive force. It is reduced in skin irritation and highly safe. It is excellent also in the releasability and percutaneous absorbability of the drug.
